LOSS PREVENTION & PHYSICAL ASSET MANAGEMENT

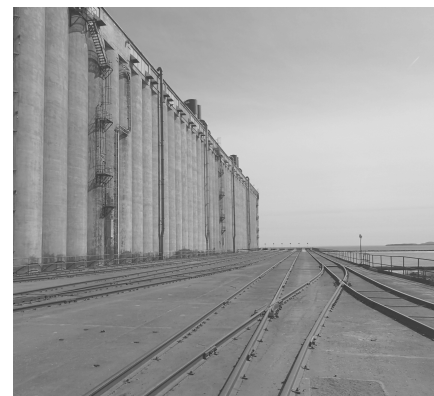

VARIOUS AGRIBUSINESS AND INDUSTRIAL FACILITIES

On behalf of our Client, Parker prepares loss prevention reports and probable maximum loss reports for various agricultural, cannabis production/processing, and industrial facilities.

To prepare the reports, Parker completes a site inspection to observe physical conditions at the facility and to review the facility programs with staff with the aim of reducing the potential of accidental loss. Based on the findings of the inspections and information provided, Parker issues reports principally designed to identify exposures of risks and hazards which if not rectified may increase the frequency or severity of losses at the facilities.

The reports are based on information collected by Parker from facility staff and a site inspection including:

- Review of: Building Construction, Operations, Fire Protection Systems, Security Systems and Programs, Inspection and Maintenance Programs, and Emergency Planning
- A physical inspection of all occupied spaces to observe general conditions, operational practices, and identify potential areas of risk
- Interviews with select staff to gain an understanding of the general operation of the facility and loss prevention programs in place
